Comments: Thank you for the opportunity to comment. As a frequent user of the Wilderness, I have several issues with approval for a strip mine in the Payette Forest. My concerns are bullet pointed below.

- The Stibnite Gold Project puts not only the famed Frank Church-River of No Return Wilderness at risk, but also the East Fork of the South Fork of the Salmon River and endangered species such as salmon, steelhead, and bull trout.

- Under the preferred alternative, road construction and mining operations would cause serious impacts to the River of No Return Wilderness, including noise audible from a nearly 2-mile radius, wildlife disturbance and displacement, increased access to and activity in what are now quiet and lightly-visited places in the Wilderness, and sediment pollution in streams within the Wilderness.

- As frequently happens, the wilderness evaluation erroneously downplays these impacts.

- The new proposed road would sit 100 feet from the wilderness boundary or could even enter the Wilderness, as the most logical location for the road seems to be an existing pack trail that dips into the Wilderness.

- We've already degraded much of the regional habitat to the detriment of many species. The last thing this area needs is more toxic mining and associated impacts.

- The Forest Service needs to deny the permit for Perpetua Resource's Stibnite Gold Project and require Perpetua to finish cleaning up the mine site.
