Title:

Comments: The Frank Church/River of No Return Wilderness area is home to critically endangered species of fish, including salmon, trout and steelhead which are currently thriving there. A mining operation will cause sediment and noise pollution not only in that primary river, but also in both the East and South forks of the Salmon River, disturbing wildlife in a designated wilderness area. This land does not belong to any private business or mining company, but to the people of the US. Please do not grant a permit to allow mining to Stibnite. They have no right to destroy this pristine wilderness area. Thank you.
