Comments: Thanks for letting me comment on this issue. The Stibnite Gold project puts not only the famed Frank Church-River of No Return Wilderness at risk but also the East Fork of the South Fork of the Salmon River and endangered species such as salmon, steelhead, and bull trout.

Under the preferred alternative, road construction and mining operations would cause serious impacts to the River of no Return Wilderness, including noise audible from a nearly 2-mile radius, wildlife disturbance and displacement, increased access to and activity in what are now quiet and lightly-visited places in the wilderness, and sediment pollution in streams within wilderness. The wilderness evaluation erroneously down plays these impacts

I am not a big fan of mining in our wild places even outside of wilderness, they are way to destructive, usually these mining companies do not care if they destroy the environment because it is all about greed, it scars up the landscape for life and then you have a piece of ugly landscape.

The last thing this area needs is more toxic mining and associated impacts. The FS needs to deny the permit for Perpetua Resources Stibnite Gold project and require this company to finish cleaning up this mess of a mine site
