Title:

Comments: We just spent millions of dollars cleaning up the last one. All the "guarantees" about this one being safer than the last are just one leakage or damage to the surrounding areas away. The damage will already be done in just road construction and ground preparation before the eventual mine itself. This resource is not replaceable. Do the right thing for the planet and for the people who enjoy these places as well as all the wildlife that depend on its safekeeping.

Thank you.
