Comments: The Stibnite Mine project will result in the loss of over 120 acres of high-functioning wetlands that support recreation and wildlife. It will negatively impact the general water quality of streams found within the site- stream temperatures are predicted to be elevated for up to 100 years within the mine site boundary. This project poses an unacceptable risk to already-struggling Snake River salmon and jeopardizes the limited progress that has been made to recover them to date. Please stop this project from further development.
