Title:

Comments: Please do not permit this gold mine at the headwaters of the Salmon River. As is the mine development would destroy so much critical habitat for bull and cutthroat trout; in the future, acid mine drainage will ruin this cherished river in perpetuity. We have so few wild places left. The Salmon is one of them. I've boated its length three times and hope to do so many more. Its history, wildlife, pristine ecosystem and clear waters make it so special. There's no question that mining will, at some point, ruin it; show me a hard rock mine in our history that hasn't ruined the waters its built on. Please do not permit this project.
