Comments: My biggest concern with the proposed Stibnite mine is the 400 million tons of mine waste residing indefinitely on site. I do not trust Perpetua Resources to manage this waste in a fashion that will protect the health of the South Fork Salmons ecosystem. Besides having the privilege as a kayaker to experience this amazing area, I believe this river is too important to the already fragile Salmon population to put at any further risk. Writing a comment in opposition to the SDEIS is the power I hold currently. The United States Forest Service on the other hand has much more power in the deterring the future of this land. If you do not believe the SDEIS is accurate, truthful and complete or if you are able to understand how upset and concerned this community is, I hope you will choose the "no-action" alternative. Thank you for your time.
