Comments: Please do not allow the construction of the Stibnite gold mine to commence in the headwaters of the South Fork Salmon. This pristine area is a very important headwaters for what is left of the returning salmon population and the potential for contamination of it and all the waters downstream is too great to allow this sort of mining. When the total yield of payload is measured in ounces, it makes one skeptical that any remediation could or would ever take place if something we're to occur. Take some advice from old TR- "Leave it as it is, man cannot improve upon it ". Thanks for your diligence
