Comments: Perpetua Resources and it's team of professionals and consultants have studied the Stibnite Gold Project (SGP) site for the past decade.

The submitted plan of operations incorporates closure and reclamation activities, and mitigation avoids, minimizes, or compensates for adverse environmental effects caused by the SGP, and also incorporates actions that mitigate legacy contamination at locations within the mine site. Under the plan of operations, construction, operation, closure, and reclamation phases of the SGP would take place over a period of approximately 20 years. Also included is long-term monitoring and maintenance. Environmental monitoring and maintenance would continue for as long as needed to demonstrate that the site has been fully reclaimed.

The Forest Service needs to approve the permit for Perpetua Resource's Stibnite Gold Project.
