Comments: Regarding the Stibnite gold project,

This mine poses great ecological harm to the wildlife that call the Salmon river home. Noise pollution, habitat disruption and chemical runoff are all incredibly damaging to the fragile river system. The environmental impact outweighs any potential benefits. Too many times rivers and the environment downstream have been heavily damaged due to mining projects. I ask the Forrest Service to veto this proposal. We need to allow nature to thrive, it is one of the most beautiful aspects in Idaho. Keep Idaho wild.

Regards,

Makayla Sundquist
