Comments: I am commenting with my vote to oppose the south fork of the salmon river, stibnite mine .

The issues are as follows. Many big organizations claim to give back to the community with jobs in infrastructure and support power that is needed, but there are alternatives to these presets that outweigh the risk and environmental concerns that a gold mine in this day and age on such a pristine, salmon river could cause. There are almost no exceptions. Statistically speaking, large corporations, and big money come in with care and exploited public attention to steer away from the fact that in the and their focuses on also making money and if making money via mining for gold, is there goal then that's what they're going to steer their business plan for not environmental concerns or thoughts of the future, free, flowing rivers, supporting once again, in natural salmon habitat. If you have any good conscious left, we cannot vote for this damn/gold mine.
