Comments: Hi there,

After reading about the proposed Stibnite Gold Project I am deeply concerned for the nearby landscape, residents and recreators. The impacts of this mine are vast and long lasting, the impression that will be left in the landscape is permanent and can not be taken back. The proposed mine will cause countless negative externalities effecting water quality, health of native animals and flat out destroy over 100 acres of wetlands. Please consider alternatives to the mine or at the very least work to mitigate the undeniable impacts from the mine.
