Comments: As an avid outdoorsman/Whitewater enthusiast, I am 100% against this mine operation. There is no way possible to protect the salmon river drainage from the waste material that comes from a mine. No matter what is said from the mind company, we all know, the pollution and waste that will continuously flow into a cherished river/drainage/home to mini native fish of Idaho. we look to the federal government as our voice to say no. The mind company will simply say what we want to hear about how they will go about protecting the river from any sort of pollution. It's simple, big money politics that get projects like this underway, and the rest of us take the brunt without having a voice. Please listen to all of us who use the river, love the river, and consider the river a beautiful gem of Idaho.
