Title:
Comments: This project put fish at risk not only on the SFS but all the way downstream and to the ocean where these fish travel and then attempt to return home. The recreational fishing on the SFS will be put at great risk as will all the rivers and fish downstream. We want to bring back Salmon and Steelhead to their home, not put one more obstacle in their way.
The SDEIS claims irreversible losses to all of these species. Impacts to fish come from many different sources, including direct loss of habitat, increased stream temperatures, and hazardous spill risk (SDEIS p. 4-386).
This alone should be enough to stop this project. The impact locally and to the neighbors who all live downstream must be considered. It is impacting the waterways and fish all the way to the pacific.
