Comments: The current plan fails to reach a reasonable level of clean up post mining activity. We must hold an extremely high level of reclamation for the project to be safe.

Stibnite's creation of toxic waste will not help the South Fork heal from past mining operations. All toxic waste past and present must go!

This project fails to accomplish any goal of cleaning up the historical scars and contamination left by previous mining.

Lastly, we do not trust Perpetua Resources and the parties involved in the Stibnite mine to hold themselves accountable for any damages to the South Fork watershed NOW Or ever.
