Comments: This incomplete EIS requires a supplement to provide the public with adequate information about:
*Transportation plans for coping with year-round heavy mining vehicles and other mining traffic in nearby Idaho towns and particularly the already-congested Highway 55
*A comprehensive plan to protect fish in the South Fork, Salmon River, and all mining-affected tributaries, including water quality and temperature
*An effective monitoring system for measuring arsenic levels and its influences on people's and wildlife health
*Addressing realistically climate change possible revisions of the water courses, erosion and drought-encouraged fires.

Without this additional information, expanding this cyanide leach gold mine may bring irreversible damage to the huge mine area and its surrounding environment.

Thank you for considering my comment.
