Comments: Please listen to the people who have nothing personal to gain by this proposal. Any information generated by Perpetua is undoubtedly biased because of their objective to make money off of the natural environment which is owned and should be protected by the public for the benefit of the wildlife that call it home . There are plenty of experts who have studied this proposal extensively and submitted comments to you against approving this due to the overwhelming negative impact it will have on the flora and fauna of this area. The value of their comments should carry so much more weight than a unclear, vague and deliberately misleading report generated by the entity that stands to gain financially by this project.
Please be a responsible steward and protector of the National Forest you have been tasked to care for. I urge you to select the "No Action" alternative for this proposal.
Thank you!
