Comments: In addition to other wide spread ecosystem impacts, I am specifically worried about the haul road impacts on streams nearby. The 90 ft requirement suggested could present challenges in providing adequate fish passage. I hope further reports address the road width as well as specific designs with proven efficacy for passage of fish.

Furthermore, I am concerned about the lack of a dam breach analysis. I expect that any future dam research will include a breach analysis not only for the final dam but for all stages of construction. Recognizing the potentially catastrophic down stream impacts of a dam failure is key to making such a big decision regarding land and river use.

Thank you for your time, I look forward to your response.
