Comments: Hello.
I am against the Johnson Creek Road route. I am worried about what will happen to the spawning salmon on the South Fork Salmon River also funneling endangered fish through a tunnel system may be harmful to the fish. Why destroy part of the river. Will this not confuse the fish also doesn't it take a large amount of water to mine. What happens during drought times? Won't this make it harder for spawning fish and any endangered fish for that matter? I don't not agree. Please rethink this and consider what will happen to the "threatened " wildlife and how this will impact them.
Thank you kindly,
Janice Crow Dargent
