Title:

Comments: I was a member of the BNRC (Butte Natural Resource Council), which provides recommendations to the governor on how money committed to restoration in the Butte area is to be spent, when we decided to allocate ~ 10 million dollars to the construction of the Basin water treatment plant. This plant is critical for the treatment and supply of drinking water from the Basin Creek watershed to the Butte community.

Fuels treatment is a critical component of maintaining and protecting this watershed so it can continue to be a source of drinking water for the community.

I enthusiastically support this, and any future, proposed fuels treatment programs in the watershed.

Please do not hesitate to call me if you have any questions in regards to this!

Dave
