Last name: Nystrom

Organization:

Title:

Comments: The proposed mine would negatively impact important and endangered fish species in the United States, all in the name of short-term profit.

Also, the overall impact on wildlife, wildlands, fish and wild rivers would be irreversible, with long-term, unacceptable impact on ecosystems, cultural resources, and the overall watershed of the Salmon river.

In the interest of future Americans, including those in the proposed project and downstream from it, I encourage you to select the 'no action' alternative for this project.
