Comments: This job would be important to my future.

I work as a welder helper and have for the last 25 years. I remember working on this line in 2018. In 2018 I saw my whole job shut down and I was fortunate enough to find other work near Philadelphia.

In 2018 this job would have had me close enough to my son's, one living in Valax,VA and one living in Hubert, NC, when I had time away from work.

It would make the natural gas resources of our country available on the world market and also provide a generationally changing technology to be developed all along the proposed routes

It wasn't that long ago my entire industry was hailed for dramatically lowering the carbon foot front of my country the United States.
