Comments: I am incredibly excited for the potential of developing single track trails in the Jackson Mountain area. I have enjoyed biking in that area for a long time and look forward to their being established trails that are better maintained to ride. This area needs more variety in our mountain bike trails (also multi use), especially with additional downhill sections that this area will provide. It will give the mountain bike community trails that are longer with more vert And continue to attract locals and tourists looking for great mountain biking.

I am apprehensive about additional logging in that area because of how much it changed the forrest initially, but understand the necessity on some level. I wish the gravel pit should find another location. The truck traffic would ruin Jackson Mtn road and make it dangerous and annoying for everyday recreation. That road is already fairly busy in the peak season and I can't imagine there aren't better choices that don't impact such a pristine National Forrest area.
