Comments: Let this company complete this project. They have responded favorably to all protest put before them. Sure there is goin to be some erosion before seeding takes place but there is catch fences and dikes in place to prevent much harm. I fly over completed sections of this pipeline in West Virginia almost daily on my air medical job and it looks as good as power line right sways maybe even better. I just heard on the news that because of Californias ludicrous environmental laws that prevent construction of dams and reservoirs that 95% of there recent precipitation flows back into the ocean and that they don't have sufficient enough water supply. Politics is destroying this country from within. SMH. Thank you for your time.
