Comments: The proposed plan looks great, but is not accessible for those with physical disabilities. The solution that I would propose would be to instal video cameras along the trail, at the Lake, and above so that those with disabilities could view the trail and Lake with all its beauty. These cameras could also be used by the Forest Service to monitor the trail. Individuals could then access the cameras along the trail and lake by using their smart phones. There could also be a viewing screen in the entrance to the bathroom area that would be on continually for those who visit the park, but are not able to access the trail. Thanks for giving this matter your consideration. Jim Sebben, PhD
