Comments: How can you put a gravel mine so close to a subdivision? We live in an area where we have our windows open during the months that the gravel pit is in operation. All these people will be inhaling dust that will be detrimental to our health. This gravel mining will also have a huge impact on the wildlife on Jackson mountain. The hikers and bikers, hunters and campers will also be impacted by the dust, noise, vibrations and most importantly all the dump trucks stirring up dust and the danger of their weight and speed. A mountain that has been enjoyed for decades will now be destroyed and taken away by a Forest Service that I thought was for the preservation of nature and enjoyment of it. I hope the Forest Service will stand up and make the right decision to move the gravel mining to a more appropriate location.
