Comments: The bike trails and fuels and vegetation mgmt are solid ideas.

Locating a gravel pit there, however, is not.

The error in location a gravel pit in the midst of an area just upgraded to a recreational area (bike trails) is self evident.

And that is not to mention the impact an industrial operation would have on the nearby residential neighborhood.

Dust, noise, traffic.

Speaking of traffic, locating this operation and the dozens of truck trips it would generate daily along the two lane blacktop of busy hwy 160 is accidents waiting to happen. This location will result in someone being killed.
