Comments: When we are losing more and more old growth forest and are losing the battle with climate change and the urgent need to sequester carbon, we do not need to cut this mature forest. This forest area will never be the same if logging is allowed. Logging compacts the forest floor, destroying soil microbiome, along with the loss of habitat and fragmentation. The list is long for the negative impact. Stop pushing ahead on a project that the people do not support. Too the many, many tourist who visit Vermont want to see the beautiful mountains and hillsides, not a destroyed forest.
