Comments: The Jackson Mountain landscape project should move forward for the sake of the entire county, I understand this will be used for the county only. As a Mtn Biker, public land recreation user and home owner in Archuleta Co, I am excited for the future Mountain bike trail system introduced by IMBA and Dust2 however, I see and understand the much needed gravel this community needs to sustain roads, trails, growth etc. We cannot keep passing up on opportunities to find sustainable locations to put a gravel pit as we bleed the city/county of road funds due to driving all the gravel in from 1+hr away, I have purchased rocks, dirt and gravel in the last 8 months and the cost was staggering compared to 3 years ago. If we want to look at environmental impact to our lands think of the carbon footprint, day after day of 1500+ round trips will equal to our environment. Protecting a small yet viable source for one neighborhood, one small percent of land users, should not stop the process from moving forward.
