Comments: The National Forest Management Act requires the Forest Service to revise their plans every 10-15 years. The current plan is 17 years old, and does not reflect current science regarding the forest's role in carbon sequestration. There has been a change in public interest, and significant changes in weather patterns since the 2006 Plan was written. The Plan needs to be amended at the very least to reflect the current science that supports leaving old and mature trees in the ground.
