Comments: STOP DESTROYING OUR CLIMATE!!!

We need old growth Forrests to sequester carbon, these are some of the oldest trees in New England! Cutting down our best chance at having a mature old growth ecosystem to create more early succession land doesn't make any sense! If you need timber, take it from less mature Forrests that will grow back faster, I get that you're trying to balance climate and economical health, but we cannot destroy some of the oldest and most effective carbon sinks in our state! Find another way.
