Comments: The proposed shared roads and land on Jackson Mountain for both recreational mountain bike trails and also a gravel pit operation pose significant health and safety issues for those who want to ride bikes or who live near the proposed gravel operation. The air quality will be negatively affected by the dust to the very near neighbors and to those who come to mountain bike. Isn't beautiful fresh air a part of the mountain biking experience? The mountain bike trail system is a very exciting addition to our area but the gravel operation will completely ruin it. Bikers will be at the mercy of gravel truck drivers focused on getting their job done quickly as possible. The site for this gravel operation needs to be rethought and a location distant from any neighborhoods should be selected. Please listen to our concerns and support another location for the gravel operations.
