First name: Barbara

Last name: Brosnan

Organization:

Title:

Comments: Please update your research and logging protocols for logging in general and especially on the Green Mountain National Forest Telephone Gap logging project, and then cancel this logging project. By now you have to realize that those trees are much more valuable to the public as carbon sequestering locations than they would be after removal. To destroy these trees which are currently removing carbon from the atmosphere and replacing them with saplings means you would be shutting off the carbon removal for at least fifty years. As a citizen of the US I make this request regarding the health of our shared public lands and the health of our nation.

Thank you in advance, and please do your job on our behalf.

Barbara Brosnan.
