Comments: I support a position where the forest service would go forward with a development option that accepts only minimal changes to the facilities in existence. The Area should be managed to preserve wilderness and promote visitation that does not harm or degrade that character.

As for the Dredge Lakes part, I support doing improvements to the trails located there. These improvements should correct the damage done by informal and presumably unauthorized trails created by biking enthusiasts. The presence of these informal trails is strong proof of what the public considers the highest and best use for that part of the management area.
