Title:

Comments: Please stop cutting down mature forests. We need these forests for carbon sequestration, for wildlife and ecosystem diversity, for air and water quality and for overall quality of our lives. It is a ruse to suggest we need early successional habitat or any other human management of forests especially old growth. I am a volunteer Conservation Commissioner in my Town and actions like yours just make all our work seems useless. 12,000 acres of forest destroyed. Please just stop. Learn the science and follow it.
