Comments: I am a supporter of having a gravel pit at Jackson Mountain. Because as a local community member of Pagosa Springs, I can see that there are some road issues, every time after precipitation, they become out of shape, people will be more safe and healthy because there will be less dust on the road. Another thing is that I didn't find a large problem about the location of the gravel pit, the noise will be tolerable as long as they work at regular work time. My idea is to use the gravel we get from the gravel pit to build more road in San Juan National Forest, so that people can explore more. I am certain that the bikers will be happy if the transportation is more convenient. Once the transportation is more convenient, it can effectively prevent forest fire and help us discover better places instead of just stuck on Jackson Mountain.
