Comments: I strongly oppose the Jackson Mountain Landscape Project #61809. This project could have devastating effects on the environment, wildlife, and local communities. The proposed logging and road-building activities would fragment and destroy important habitat for endangered species and other wildlife. The increased traffic from logging trucks and heavy equipment would also disrupt local communities and pose a significant risk to public safety on narrow and winding roads. Furthermore, the economic benefits of the project are unclear and may not outweigh the potential environmental and social costs. Therefore, I urge decision-makers to reject this project and instead prioritize conservation and sustainable land management practices that support both the environment and local communities.
