Comments: I support the idea of developing more legal mountain biking trails. This proposal is a good idea because I have many friends that are mountain bikers and I occasionally mountain bike. Developing new mountain biking trails would give DUST2 and other mountain bikers a safe space to participate in their sport. I understand that the opposing side to this proposal might think that this idea could damage animal habitats and hurt resources. A solution to this problem is to make sure that these trails are away from resources and animal habitat so it won't be affected. With this solution mountain bikers can have new safe trails while animals and their habitats will be safe and resources won't be affected.

I do not support the proposal of a gravel pit on Jackson Mountain. This proposal would not have a good impact on the environment because big trucks going back and forth can damage the roads. Also, the equipment used to process the gravel can pollute the air and all the noise can affect the residents peace. I understand that others may support the gravel pit because it can help fill potholes and there is a high demand for it. One solution is to have a gravel pit but not on Jackson Mountain. This would give residents quiet and there could be a better route to get to a different location so everyone stays safe.
