Comments: My biggest concern with this potential drilling is water, which is everyone's concern. But even if nothing gets messed up with aquifers, personal wells, etc., what about the water they need for the drilling. I'm not okay with them getting it from town. We are in a dry area and I do not think it a wise use of resources to allow this drill project to take place at all and utilize millions/billions of gallons of our water resources. Thank you for your time.
