Comments: Please do not follow through on your Telephone Gap Project. At this critical time of climate change we need all the valuable forests for carbon sequestration as a top priority. The damage logging will do there effects animal habitat, recreational use, water quality, etc. It is NOT needed and it will cause irreparable damage for years to come. Mother Earth is already crying out in too many ways for ALL the harm we have done to our home. It's past time to take notice and leave well enough alone. Listen to the people who live here, please.
