Comments: I am 100% against swapping/trading acreage in the National Grasslands or any federal land that touches the fingers of Lake Ralph Hall!

When the lake was ok'd I felt this will bring a lot of wildlife species to this area that can settle, mate, and live in a sort of protected area. The lake is forcing lost of not only the homes of wildlife that the lake will take away, but also development of land around the entire perimeter of the lake will impede with the survival of this wildlife. In part, the Grasslands, and Federal owned land as it is now, insures this wildlife survival away from man and developments, and will be an asset if kept from Upper Trinity or any other developers.

Denying swap will help bring better interest to this area than housing, and water/fishing.
