Title:

Comments: The LAST thing we should be doing is cutting down more trees! We should be planting more, and leaving old-growth forests alone. My mother recently died from lung-cancer, even though she was NOT a smoker. Air pollution was a contributing factor in her death, and continues to poison us all, every day. Trees help to filter the air, slow global warming, and provide forests where wildlife can thrive. Please DO NOT allow the Telephone Gap Timber Sale!
