Comments: The White House executive order of April 2022 asks that we "conserve America's mature and old growth forests on Federal lands." Scholars like Prof. Moonmaw PhD. have stated that in multi-aged forests 1/2 of the carbon is stored in the largest 1% of trees. Therefore, let the Telephone Gap forest continue to mature so that it accumulates the most carbon possible to help curb the rise of atmospheric CO<sub>2</sub>. Thank you.
