Comments: I believe this is a very necessary project. The forest is way too thick. I would request that when the loggers come in that they take all larger branches (3" & Larger) with them. They probably won't want to do that, but we are after long term beauty of the forest. Also with the trails that are created for the logging, they should become a part of the trail system. We have something really wonderful with the trail system and it brings many people to the area. As crowded as the trails are, if we give the trail users more trails it should eliminate some of the congestion on the weekends. Let's get as much as we can out of this project.
