Title:

Comments: Please no logging of Telephone Gap! this is exactly the kind of habitat we need to protect, both to sequester carbon to slow climate change, but also because in the US 34% of plant species, 40% of animal species, and 41% of ecosystems are at risk of extinction. (<https://www.natureserve.org/bif>)

Forests are essential habitat for many species, and logging mature forests is leading us towards environmental catastrophe. Protect the forest, leave it alone.
