Comments: Although I currently reside in NH, I have owned 60 acres in Glover, VT for 60+ years and have managed it responsibly. I believe in responsible woodland management. But things have changed. Climate change is intensifying more rapidly than most people ever expected. Every tree we cut removes one part of a vital carbon sink, especially if any part of that tree is chipped or burned. We simply cannot afford to lose any more trees than are absolutely necessary. Standing, they sequester carbon more effectively than when cut regardless of the use. So if you cannot argue persuasively for an ESSENTIAL use of any given tree, then DO NOT CUT IT.
