Title:

Comments: My message is a simple one: we need to save every single tree we possibly can worldwide, especially older trees which store more carbon (younger trees can never catch up!), if we are going to mitigate the ravages of climate change on our Earth, her plants and creatures, including the human variety currently alive and especially generations to come. PLEASE DO NOT LOG THESE TREES--THERE IS NO LEGITIMATE EXCUSE FOR IT THAT MAKES UP FOR THE HUGE AND IRREPARABLE LOSS WE COULD INCUR!
