Last name: Connolly

Organization:

Title:

Comments: Please do not proceed with this project.

For the sake of the climate, which includes the effect of deforestation on carbon sequestration, but also the emissions generated by the work of this project -- from the arrival of the machines through the work itself and on until the end result of whatever is done with the wood.

For the sake of the animalia, plantae, fungi, and more living in the forest. Human choices are destroying our planet, and all living beings are suffering as a result of human activity and choices. Activity and choices that are being made when we literally know better, and know how these decisions and actions are destroying everything.

Don't make this another one of those choices. Please.
