Comments: What is the science behind introducing non native trees such as tulip tree into proposed clear cuts in Telephone Gap? In looking at the species that the tulip tree supports, it appears they are all non-endangered species such as cardinals, quail, mice, red squirrels, grey squirrels and rabbits.

Why interrupt current habitat of threatened species such as the pine martin, and endangered species such as the long eared bat in order to encourage species that are common?

It simply does n to make any sense.
