Title:

Comments: We need intact forests. An intact forest is more resilient, at a time when trees are under extreme pressure from climatic changes. To log these forests at this time harms us all! Please do NOT log these forests. You will weaken them. Logging will compact the soils and kill or damage the micro structures in the soil. It will open the area for invasive species to move in, it will exacerbate periods of drought. The facts are known: an intact forest is the healthiest and WE NEED THESE TREES, at a time when the forests in the west are burning, and the Amazon is being burned.
